

## THE MISSION

SWANA's national mission is to "advance the practice of environmentally and economically sound management of municipal solid waste in North America."

Arizona Chapter members are a diverse group of dedicated individuals working daily on waste management solutions for Arizona communities. Members are actively involved in waste collection and transfer systems; material recovery, recycling, and reuse; and landfill engineering and operations. In a continually changing industry like solid waste, there is an ongoing need for members to upgrade their skills. The goal of the Arizona Chapter is to assist our members to meet work challenges effectively and professionally.

Chapter objectives include responding to the changing needs of our members by providing cutting-edge information through continuing education and professional development. The Arizona Chapter accomplishes these objectives by encouraging member participation in our division committees; hosting general membership meetings, facility tours, and technical training sessions; distributing quarterly newsletters; and providing statewide assistance and networking opportunities.
